Supplementary power socket

TAK-TAK ADAPTER!

The simplest way to add a power socket to a workstation.

Fanton have come up with the new TAK-TAK adapter: a simple and effective system that exploits equipment powered with standard IEC 60320 sockets - such as computers, photocopiers and monitors - to increase the number of power sockets available in the work area. The solution is as simple as it is brilliant and proves very useful even where there are no sockets at all or where they are in an awkward location.

Original from the word go

The driving force behind everything is a desire for something new and a flair for research. This sets the scene for the invention of new products and new solutions, like the Tak-Tak adapters. Behind each product inevitably lies the invaluable work of the R&D department, who manage to turn ideas into concrete reality. At Fanton, only the best ideas are made into designs and only those designs that meet the exacting standards of practicality, safety, quality, durability and environmental friendliness make it onto the shelves bearing the FME brand. The Tak-Tak adapter - an Italian-made product covered by an exclusive Fanton SpA patent - stands as testimony to this fact.

Standard IEC 60320

A PC, printer or fax would normally be powered by means of a plug and socket connection complying with the standard IEC 60320. Inserting the adapter between the PC's plug and socket connection creates an additional outlet with a standard P30 socket manufactured to Italian standard CEI 23-50.

The Tak-Tak adapter has been designed to draw energy above all from computers, monitors, fax machines, printers and photocopiers, though it can be used on any appliance powered with an IEC 60320 socket.

Use

The product can be used at 250V for a maximum current of 10A. The product is made from heat- and impact-resistant thermoplastic material. Given that the adapter is used at the rear of equipment, the P30 socket is separated from the rest of the connections by approx. 15 cm of cable to facilitate use. The Tak-Tak adapter comes in black.

Packaging

The Tak-Tak adapter is sold in cardboard packaging featuring a Euro slot so that it can be hung on wall-mounted panels. The completely recyclable packaging, in addition to bearing eye-catching graphics that "stand out on the shelf", offers a wealth of drawings to better steer consumers in their choice.
