

81032 Socket
80052 Plug

The latest in professional

Fanton SpA reaches a new frontier in design, merging form and function in electrical products for professional installation in the new rubber plugs and sockets now added to its range.

Once again, FME products offer outstanding functionality, quality and creativity. Yet more proof of Fanton SpA's commitment to product innovation and quality.

The energy Fanton
Developing new products, modifying a detail to improve functionality, testing safer and more durable materials, and creating new shapes and designs, are all important for the growth of an industrial organisation

like Fanton, which prioritises values central to its drive for globalisation and quality.

Fanton SpA launches a fresh way of thinking of and conceiving electricity, and gives shape to a series of products destined to change our shared image of safety and design.

New series of rubber plugs and sockets

The rubber series can be used for voltages up to 250V and currents up to 16A, and is intended for professional and other applications requiring rugged products able to withstand the most widely varying, demanding operating and weather conditions. The plugs and sockets in this series are produced in the following types, to meet the market's needs.

The series includes:

Article Code	Article Description	Colour	Pack Pcs
80052	Plug 2P+E 16A French-German st. IP44 in rubber	Black	10
81032	Socket 2P+E 16A German st. IP44 in rubber	Black	10
81033	Triple socket 3x2P+E 16A German st. IP44 in rubber	Black	10
92976	Triple socket 3x2P+E 16A German st. IP44 in rubber Plug 2P+E 16A - Socket 3x2P+E 16A	Black	1
92977	Extension 10 m - IP44 with H07RN-F (3x1.5) cable Plug 2P+E 16A - Socket 3x2P+E 16A	Black	1
92978	Extension 20 m - IP44 with H07RN-F (3x1.5) cable Plug 2P+E 16A - Socket 3x2P+E 16A	Black	1
92986	Extension 5 m - IP44 with H07RN-F (3x2.5) cable Plug 2P+E 16A - Socket 3x2P+E 16A	Black	1
92987	Extension 10 m - IP44 with H07RN-F (3x2.5) cable Plug 2P+E 16A - Socket 3x2P+E 16A	Black	1
92988	Extension 20 m - IP44 with H07RN-F (3x2.5) cable Plug 2P+E 16A - Socket 3x2P+E 16A	Black	1

Ergonomic in form and technology

The new rubber plugs and sockets are of sophisticated design, with an ergonomic shape offering an easy, convenient grip.

They are made from a technopolymer which gives them resistance to any weather or operating conditions, protects them against wear and breakage, and also provides an original non-slip effect, giving the operator a firmer grip.

Cable retainer

The innovative inseparable quick-action cable retainer allows the cable to be fixed (without using a single screw) by just turning the screw collar, ensuring that any pulling or twisting of the cable will not be transmitted to the ends of the wires connected to the socket connectors or plug pins. This innovative system keeps all water and/or dust out of the product, protecting it from damage.

One feature of fundamental importance for the user's safety is that the screw collar can be tightened by just turning a locking element between the collar itself and the body of the unit. This makes tampering by unauthorised persons such as children impossible. In the triple version, the terminal box is complete with a lid with two screws for absolute simplicity for the user when wiring the cable. In addition, the tree feet on either side of the product ensure that it is raised above the ground, so that no dust, liquids or other substances can come into contact with the socket's surface.

Eye-ring

Another unique feature of the professional series is the eye-ring, fitted to give easier connection and disconnection. This is even more beneficial when units are used in environments with dust, moisture, oil, etc. Thanks to this simple, original feature, it is also possible to prevent the product from being damaged and creating a hazard (treading on the unit, puddles of water, etc.) because the unit can easily be hung up.

Guaranteed protection

All products are constructed with reference to the DIN49440 standards with IP44 protection.

International patent

All products in the series are protected by a European patent and form part of a programme by means of which FME intends to consolidate its market share, by reasserting its reputation for quality and innovation in the electrical products sector.
