

## Fanton's test laboratory's WMT is renewed

CONSELVE. Fanton has once again achieved WMT authorisation: the audit of Fanton's Test Laboratory by IMQ was completed with a positive outcome, authorising a WMT (**Witnessed Manufacturer's Testing**) regime.

The international WMT approval is issued by the IECEE (System for Conformity testing and Certification of Electrotechnical Equipment and Components): authorising the holder to apply a WMT regime which means that it can carry out tests that are valid for the purposes of product certification, under the supervision of IMQ inspectors.

The renewal is done every 3 years, although checks are carried out every year: thanks to this renewed authorisation after that of 2009, Fanton can continue to do tests in its own in-house laboratory, which further speeds up the product development phases, giving the end user a further guarantee.

The official WMT document can be downloaded from the institutional website, which also indicates all the SMT, WMT and TMP authorised laboratories, with a list of the standards according to which tests may be carried out.
